Methamphetamine in Canada

Nationally, use is low among the general population

National use of methamphetamine is low, but use and harms are on the rise in certain regions

For more detailed information on these increases, see CCSA’s Methamphetamine Canadian Drug Summary

What can we do about the increasing use and harms of methamphetamine

Researchers
Prioritize monitoring and knowledge sharing about drug use and harms

Policy makers
Address determinants of health related to the use of meth and other substances

Service providers
Increase availability of treatment and harm reduction services
