Cannabis Use among Canadian Students

Data from 5 provincial, and 2 national surveys, covering 2007–2015 tell us that:

- **1 in 5 students** who used cannabis, drove a motorized vehicle after using it.
- **1 in 3 students** used cannabis in 2012-2015.
- Up to **1 in 3 students** who used cannabis drove a motorized vehicle after using it.
- Males used cannabis more frequently, perceived it as less risky and were more likely to drive a vehicle after using it.
- **14 years** old was the average age of first use.
- Use of cannabis among Canadian students declined.

To understand the impact of cannabis legalization on youth, we need to continue collecting good data consistently across all provinces and territories.
