Provincial Patterns and Trends in Cannabis Use among Youth: Ontario

Background: Cannabis Use in Canada

This factsheet presents recent patterns and trends of cannabis use among young people in Ontario, including prevalence of use, perceptions of harm, cannabis use and driving, and dimensions of risk.

- In October 2018, the Government of Canada implemented the *Cannabis Act*, legalizing cannabis for non-medical use in Canada.
- The legislation prioritizes the health and safety of young Canadians by restricting youth access to cannabis through regulations on its production, sale and consumption.
- Canadian youth report the highest prevalence rates of non-medical cannabis use among developed countries.
- Patterns of non-medical cannabis use among Canadian youth vary by region.
- Some subgroups of youth, including Indigenous youth and youth belonging to gender-based or sexual minorities, demonstrate increased risk of experiencing cannabis-related harms.
- Increasing awareness and understanding of the risks and harms unique to Canadian youth can inform the development and implementation of cannabis public education efforts.

Highlights

- In 2016–2017, Ontario students reported the lowest prevalence of cannabis use in Canada, with fewer than 10% of students having used cannabis in the past 30 days.
- Students in grades 10–12 reported eight times greater prevalence of cannabis use in the past 12 months than students in Grades 7–9 (25% vs 3%).
- Prevalence of past-year cannabis use was similar among males and females (16.1% and 14.1%).
- Among students in grades 7–12 who reported using cannabis in the past year, one in three reported using it once or more per week.
- Among students in grades 7–12 who reported using cannabis in the past year, the majority reported smoking it (94%), followed by eating it in foods (44%) and vaping it (33%).
- Among youth aged 15–24 who reported using cannabis at least once in their lifetime, the mean age of initiation was 16.5 years of age for males and 17.1 years for females.
- Almost two-thirds of youth in grades 10–12 (58%) reported cannabis to be fairly easy or very easy to obtain. The usual ways of obtaining it were sharing among friends (38%), getting or buying it from someone else (25%), or getting or buying it from a friend or family member (16%).

Data Sources

This report is based on the following sources of school and population-based survey data on cannabis use among youth.

- Canadian Student Tobacco Alcohol and Drugs Survey (CSTADS) is a biennial school-based survey
 of students in grades 7 to 12, conducted on behalf of Health Canada.
- Cancer Risk Assessment among Youth (CRAYS) is a school-based survey of students in grades 9 to 12 in Ontario, Newfoundland and Labrador, Nova Scotia, Quebec, Saskatchewan, Alberta and British Columbia.
- Canadian Tobacco Alcohol and Drugs Survey (CTADS) is a telephone-based (including cell phones) survey of the Canadian population aged 15 and older, living outside of institutions and First Nations reserve communities, conducted by Statistics Canada.

Prevalence of Cannabis Use among Youth across Canada

- Ontario students had the lowest prevalence of use in Canada in 2016–2017.
- Fewer than 1 in 10 students in grades 7 to 12 had used cannabis in the past 30 days.

Source: CSTADS 2008-2009 to 2016-2017 Source: CSTADS 2008-2009 to 2016-2017

- Past 12-month cannabis use among youth in grades 7–12 has declined in Ontario since 2008–2009, for all grades, and among both males and females.
- Grade 7–9 use has decreased by half from 2012–2013 to 2016–2017. Grade 10–12 use has decreased since 2008–2009, from 39% and has remained steady since 2014–2015

Mode of Use and Ease of Access to Cannabis

Perceived ease of access among grade 10-12 students

Mode of cannabis use in the past 12 months in grade 7–12 students

Source: CSTADS 2012-2013, 2014-2015, 2016/17

Source: CSTADS 2016-2017

- Among students who have used cannabis in the last 12 months, about 40% use less than once per month.
- Age of initiating cannabis use among youth has increased between 2013 and 2017.
- Among students who have used cannabis in the past 12 months, the large majority have smoked it.
- The perceived ease of access to cannabis among grade 10–12 students has remained relatively unchanged between 2012–2013 and 2016–2017.

Usual Source of Cannabis

Usual source of cannabis among grade 7-12 students who have ever tried cannabis (2016-2017)

Source: CSTADS 2016-2017

! Due to low sample size and/or large coefficients of variation, the quality of these estimates is low.

Perceived Harms of Cannabis Use

Responses to "How much do people risk harming themselves when they do each of the following activities?" among grade 7–12 students (2016–2017)

Source: CSTADS 2016-2017

Cannabis Use and Driving

Grade 11–12 students who reported having driven a motor vehicle within two hours of using cannabis (2016–2017)

Grade 7–12 students who reported being a passenger in a motor vehicle driven by someone who had used cannabis in previous two hours (2016–2017)

- Before legalization, the majority of students reported that they shared cannabis among friends or that they purchased it from someone else.
- The majority of students feel that using cannabis on a regular basis is a risk.
- The majority of students reported they had not driven a motor vehicle within two hours of using cannabis or been a passenger in a motor vehicle driven by someone who had used cannabis within the last two hours.

[^] Moderate sampling variability, interpret with caution.

^{*}Motor vehicles include a broad range: cars, motorcycles, off-road vehicles (including agricultural machinery), light trucks and regular trucks.

Dimensions of Risk for Cannabis Use among Ontario Youth

Past 12-month cannabis use among grade 9-12 students, by ethnic group (2017)

^{*} Due to low sample size and/or large coefficients of variation, the quality of these estimates is low. Interpret with extreme caution. Source: CRAYS 2017

Past 12-month cannabis use among grade 9-12 students, by sexual orientation † (2017)

[^] Moderate sampling variability, interpret with caution.

Source: CRAYS 2017

Past 12-month use among grade 7-12 students attending urban and rural schools

[^] Moderate sampling variability, interpret with caution. Source: CSTADS 2012–2013, 2014–2015, 2016–2017

- Indigenous youth reported the highest prevalence of cannabis use in the past 12 months.
- Bisexual youth reported a higher prevalence of cannabis use in the past 12 months than 100% heterosexual youth.
- The prevalence of cannabis use among students attending school in a rural setting was slightly higher than students attending school in an urban setting in 2012–2013, however in 2014–2015 and 2016–2017, the prevalence of past-year cannabis use was similar among these 2 groups.

^{*} Due to low sample size and/or large coefficients of variation, the quality of these estimates is low. Interpret with extreme caution.

[†] Measuring sexual identity and orientation is difficult and changing. According to Statistics Canada, in 2016 4% to 10% of Canadian youth considered themselves either homosexual or bisexual.

CCSA was created by Parliament to provide national leadership to address substance use in Canada. A trusted counsel, we provide national guidance to decision makers by harnessing the power of research, curating knowledge and bringing together diverse perspectives.

CCSA activities and products are made possible through a financial contribution from Health Canada. The views of CCSA do not necessarily represent the views of Health Canada.
